

F.E.M.M.E.S. EXPLORE Phase Changes Instructions

Step 1

Take the lid off the glass bottle. Open the plastic bottle and pour the vinegar from the plastic bottle into the glass bottle.

Step 2

Use the funnel to carefully put the baking soda into the finger cot.

Step 3

Pinch the finger cot so that the baking soda doesn't fall out. Then turn it right-side-up and secure it on the glass bottle.

Step 4

Once the finger cot is secure, stop pinching the finger cot (and shake it from side to side a little) so that the baking soda falls into the vinegar.
